CRIGENE Kir7.1 (KCNJ13) (NM_001172417) Human Tagged ORF Clone Lentiviral Particle – RC229820	0L3V
--	------

Gene Summary:This gene encodes a member of the inwardly rectifying potassium channel family of proteins.<br/>Members of this family form ion channel pores that allow potassium ions to pass into a cell.<br/>The encoded protein belongs to a subfamily of low signal channel conductance proteins that<br/>have a low dependence on potassium concentration. Mutations in this gene are associated<br/>with snowflake vitreoretinal degeneration. Alternate splicing results in multiple transcript<br/>variants.[provided by RefSeq, Feb 2010]
