VDAC2 (NM_001184823) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: VDAC2 (NM_001184823) Human Tagged Lenti ORF Clone

Tag: mGFP
Symbol: VDAC2
Synonyms: POR

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Sgfl-Mlul

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC229844).

Sequence:

- 1------

Restriction Sites: Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_001184823

ORF Size: 882 bp

VDAC2 (NM_001184823) Human Tagged Lenti ORF Clone - RC229844L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001184823.1</u>, <u>NP 001171752.1</u>

 RefSeq ORF:
 885 bp

 Locus ID:
 7417

 UniProt ID:
 P45880

 Cytogenetics:
 10q22.2

Protein Families: Druggable Genome, Ion Channels: Other

Protein Pathways: Calcium signaling pathway, Huntington's disease, Parkinson's disease

MW: 32 kDa

Gene Summary: This gene encodes a member of the voltage-dependent anion channel pore-forming family of

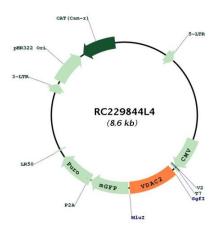

proteins that are considered the main pathway for metabolite diffusion across the

mitochondrial outer membrane. The encoded protein is also thought to be involved in the mitochondrial apoptotic pathway via regulation of BCL2-antagonist/killer 1 protein activity. Pseudogenes have been identified on chromosomes 1, 2, 12 and 21, and alternative splicing

results in multiple transcript variants. [provided by RefSeg, May 2010]
