Pepsinogen II (PGC) (NM_001166424) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Pepsinogen II (PGC) (NM_001166424) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: Pepsinogen II

Synonyms: PEPC; PGII

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

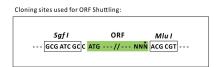

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC229872).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_001166424

ORF Size: 945 bp

Pepsinogen II (PGC) (NM_001166424) Human Tagged Lenti ORF Clone - RC229872L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001166424.1, NP 001159896.1</u>

 RefSeq ORF:
 948 bp

 Locus ID:
 5225

 UniProt ID:
 P20142

 Cytogenetics:
 6p21.1

Protein Families: Protease, Secreted Protein

MW: 34.7 kDa

Gene Summary: This gene encodes an aspartic proteinase that belongs to the peptidase family A1. The

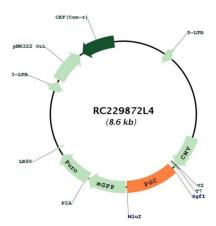

encoded protein is a digestive enzyme that is produced in the stomach and constitutes a major component of the gastric mucosa. This protein is also secreted into the serum. This protein is synthesized as an inactive zymogen that includes a highly basic prosegment. This enzyme is converted into its active mature form at low pH by sequential cleavage of the prosegment that is carried out by the enzyme itself. Polymorphisms in this gene are associated with susceptibility to gastric cancers. Serum levels of this enzyme are used as a biomarker for certain gastric diseases including Helicobacter pylori related gastritis. Alternate

splicing results in multiple transcript variants. A pseudogene of this gene is found on

chromosome 1. [provided by RefSeq, Oct 2009]
