Gene Summary:Restriction factor required to restrict infectivity of lentiviruses, such as HIV-1: acts by
inhibiting an early step of viral infection. Impairs the penetration of the viral particle into the
cytoplasm (PubMed:26416733, PubMed:26416734). Enhances the incorporation of serine into
phosphatidylserine and sphingolipids. May play a role in providing serine molecules for the
formation of myelin glycosphingolipids in oligodendrocytes (By similarity).[UniProtKB/Swiss-
Prot Function]
