

Product datasheet for RC230083L4

TMEM135 (NM_001168724) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Tag: mGFP

Symbol: TMEM135

Synonyms: PMP52

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide Sequence: The ORF insert of this clone is exactly the same as(RC230083).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_001168724

ORF Size: 1308 bp

TMEM135 (NM_001168724) Human Tagged Lenti ORF Clone | RC230083L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um

filter is required.

RefSeq: <u>NM_001168724.1</u>

RefSeq ORF: 1311 bp

Locus ID: 65084

UniProt ID: Q86UB9

Cytogenetics: 11q14.2

Protein Families: Transmembrane

MW: 50.4 kDa

Gene Summary: Involved in mitochondrial metabolism by regulating the balance between mitochondrial fusion

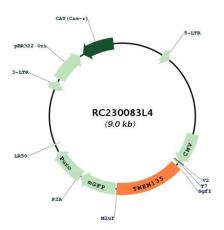

and fission. May act as a regulator of mitochondrial fission that promotes DNM1L-dependent

fission through activation of DNM1L. May be involved in peroxisome organization.

[UniProtKB/Swiss-Prot Function]
