YTHDF2 (NM_001172828) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: YTHDF2 (NM_001172828) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: YTHDF2

Synonyms: CAHL; DF2; HGRG8; NY-REN-2

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Sgfl-Mlul

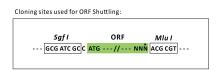

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC230234).

Sequence:

Restriction Sites:

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_001172828

ORF Size: 1740 bp

YTHDF2 (NM_001172828) Human Tagged Lenti ORF Clone - RC230234L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001172828.1</u>, <u>NP 001166299.1</u>

RefSeq Size: 2723 bp
RefSeq ORF: 1590 bp
Locus ID: 51441
UniProt ID: Q9Y5A9
Cytogenetics: 1p35.3

MW: 62.3 kDa

Gene Summary: This gene encodes a member of the YTH (YT521-B homology) superfamily containing YTH

domain. The YTH domain is typical for the eukaryotes and is particularly abundant in plants. The YTH domain is usually located in the middle of the protein sequence and may function in binding to RNA. In addition to a YTH domain, this protein has a proline rich region which may be involved in signal transduction. An Alu-rich domain has been identified in one of the introns of this gene, which is thought to be associated with human longevity. In addition, reciprocal translocations between this gene and the Runx1 (AML1) gene on chromosome 21 has been observed in patients with acute myeloid leukemia. This gene was initially mapped to

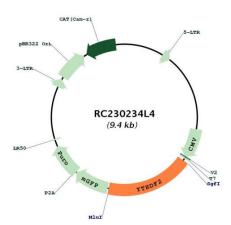

chromosome 14, which was later turned out to be a pseudogene. Alternatively spliced

transcript variants encoding different isoforms have been identified in this gene. [provided by

RefSeq, Oct 2012]
