SP110 (NM_001185015) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: SP110 (NM_001185015) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: SP110

Synonyms: IFI41; IFI75; IPR1; VODI

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC230264).

Sgfl-Mlul

Sequence:

•

Restriction Sites: Cloning Scheme:

st The last codon before the Stop codon of the ORF.

ACCN: NM_001185015

ORF Size: 1665 bp

SP110 (NM_001185015) Human Tagged Lenti ORF Clone - RC230264L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001185015.1</u>

RefSeq ORF: 1668 bp Locus ID: 3431

UniProt ID: Q9HB58

Cytogenetics: 2q37.1

Protein Families: Druggable Genome, Transcription Factors

MW: 63.1 kDa

Gene Summary: The nuclear body is a multiprotein complex that may have a role in the regulation of gene

transcription. This gene is a member of the SP100/SP140 family of nuclear body proteins and encodes a leukocyte-specific nuclear body component. The protein can function as an activator of gene transcription and may serve as a nuclear hormone receptor coactivator. In addition, it has been suggested that the protein may play a role in ribosome biogenesis and in the induction of myeloid cell differentiation. Alternative splicing has been observed for this

gene and three transcript variants, encoding distinct isoforms, have been identified.
