## Product datasheet for RC230292L4

### Glucose 6 phosphate isomerase (GPI) (NM\_001184722) Human Tagged Lenti ORF Clone

#### **Product data:**

Product Type:	Expression Plasmids
Product Name:	Glucose 6 phosphate isomerase (GPI) (NM_001184722) Human Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	Glucose 6 phosphate isomerase
Synonyms:	AMF; GNPI; NLK; PGI; PHI; SA-36; SA36
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC230292).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	GCG ATC GC ATG // NNŇ ACG CGT

ACCN: ORF Size: NM\_001184722 1707 bp

	Glucose 6 phosphate isomerase (GPI) (NM_001184722) Human Tagged Lenti ORF Clone – RC230292L4
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Me	<ul> <li>2. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>
RefSeq:	<u>NM 001184722.1, NP 001171651.1</u>
RefSeq ORF:	1710 bp
Locus ID:	2821
UniProt ID:	<u>P06744</u>
Cytogenetics:	19q13.11
Protein Families:	Druggable Genome
Protein Pathways	Amino sugar and nucleotide sugar metabolism, Glycolysis / Gluconeogenesis, Metabolic pathways, Pentose phosphate pathway, Starch and sucrose metabolism
MW:	64.8 kDa

# Glucose 6 phosphate isomerase (GPI) (NM\_001184722) Human Tagged Lenti ORF Clone – RC230292L4

Gene Summary:This gene encodes a member of the glucose phosphate isomerase protein family. The<br/>encoded protein has been identified as a moonlighting protein based on its ability to perform<br/>mechanistically distinct functions. In the cytoplasm, the gene product functions as a glycolytic<br/>enzyme (glucose-6-phosphate isomerase) that interconverts glucose-6-phosphate and<br/>fructose-6-phosphate. Extracellularly, the encoded protein (also referred to as neuroleukin)<br/>functions as a neurotrophic factor that promotes survival of skeletal motor neurons and<br/>sensory neurons, and as a lymphokine that induces immunoglobulin secretion. The encoded<br/>protein is also referred to as autocrine motility factor based on an additional function as a<br/>tumor-secreted cytokine and angiogenic factor. Defects in this gene are the cause of<br/>nonspherocytic hemolytic anemia and a severe enzyme deficiency can be associated with<br/>hydrops fetalis, immediate neonatal death and neurological impairment. Alternative splicing<br/>results in multiple transcript variants. [provided by RefSeq, Aug 2016]
