

# Product datasheet for RC230485L4

## AMPD3 (NM\_001172430) Human Tagged Lenti ORF Clone

## **Product data:**

| Product Type:                | Expression Plasmids   |
|------------------------------|---|
| Product Name:                | AMPD3 (NM_001172430) Human Tagged Lenti ORF Clone   |
| Tag:                         | mGFP  |
| Symbol:                      | AMPD3   |
| Mammalian Cell<br>Selection: | Puromycin   |
| Vector:                      | pLenti-C-mGFP-P2A-Puro (PS100093)   |
| E. coli Selection:           | Chloramphenicol (34 ug/mL)  |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC230485).                            |
| <b>Restriction Sites:</b>    | Sgfl-Mlul   |
| Cloning Scheme:              |   |
|                              | Cloning sites used for ORF Shuttling:   |
|                              | Sgf I         ORF         Mlu I           [GCG ATC GC]         ATG // NNN         ACG CGT |

\* The last codon before the Stop codon of the ORF.

### Plasmid Map:

| ACCN:                  | NM_001172430   |
|------------------------|--|
| ORF Size:              | 2301 bp  |
| OTI Disclaimer:        | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>                                  |
| OTI Annotation:        | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.   |
| Components:            | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).   |
| Reconstitution Method: | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol> |
| RefSeq:                | <u>NM 001172430.1, NP 001165901.1</u>  |
| RefSeq ORF:            | 2304 bp  |

| <b>ORIGENE</b> AMPD3 (NM_001172430) Human Tagged Lenti ORF Clone – RC230485L4 |  |  |
|---|--|--|
| Locus ID:   | 272  |  |
| UniProt ID:   | <u>Q01432</u>  |  |
| Cytogenetics:   | 11p15.4  |  |
| Protein Families:   | Druggable Genome   |  |
| Protein Pathways:   | Metabolic pathways, Purine metabolism  |  |
| MW:   | 89.3 kDa   |  |
| Gene Summary:   | This gene encodes a member of the AMP deaminase gene family. The encoded protein is a<br>highly regulated enzyme that catalyzes the hydrolytic deamination of adenosine<br>monophosphate to inosine monophosphate, a branch point in the adenylate catabolic<br>pathway. This gene encodes the erythrocyte (E) isoforms, whereas other family members<br>encode isoforms that predominate in muscle (M) and liver (L) cells. Mutations in this gene<br>lead to the clinically asymptomatic, autosomal recessive condition erythrocyte AMP<br>deaminase deficiency. Alternatively spliced transcript variants encoding different isoforms of<br>this gene have been described. [provided by RefSeq, Jul 2008] |  |
