

## Product datasheet for RC230489L4

# OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

### AMPD1 (NM\_001172626) Human Tagged Lenti ORF Clone

#### **Product data:**

**Product Type:** Expression Plasmids

Product Name: AMPD1 (NM\_001172626) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: AMPD1

Synonyms: MAD; MADA; MMDD

Mammalian Cell Puromycin

Selection:

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC230489).

Sequence:

Restriction Sites: Sgfl-Mlul

**Cloning Scheme:** 

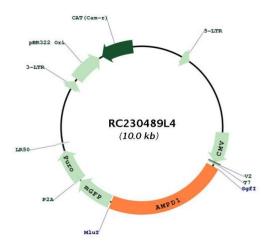

<sup>\*</sup> The last codon before the Stop codon of the ORF.

#### Plasmid Map:

**ACCN:** NM\_001172626

ORF Size: 2328 bp

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001172626.1</u>, <u>NP 001166097.1</u>

RefSeq ORF: 2232 bp

Locus ID: 270

### AMPD1 (NM\_001172626) Human Tagged Lenti ORF Clone - RC230489L4

 UniProt ID:
 P23109

 Cytogenetics:
 1p13.2

**Protein Families:** Druggable Genome

**Protein Pathways:** Metabolic pathways, Purine metabolism

**MW:** 90.2 kDa

**Gene Summary:** Adenosine monophosphate deaminase 1 catalyzes the deamination of AMP to IMP in skeletal

muscle and plays an important role in the purine nucleotide cycle. Two other genes have been identified, AMPD2 and AMPD3, for the liver- and erythocyte-specific isoforms, respectively. Deficiency of the muscle-specific enzyme is apparently a common cause of exercise-induced myopathy and probably the most common cause of metabolic myopathy in the human. Alternatively spliced transcript variants encoding different isoforms have been

identified in this gene.[provided by RefSeq, Feb 2010]
