Product datasheet for RC230504L3V

ZFX (NM_001178085) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	ZFX (NM_001178085) Human Tagged ORF Clone Lentiviral Particle
Symbol:	ZFX
Synonyms:	ZNF926
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
Tag:	Myc-DDK
ACCN:	NM_001178085
ORF Size:	2415 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC230504).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 001178085.1, NP 001171556.1</u>
RefSeq Size:	7740 bp
RefSeq ORF:	2418 bp
Locus ID:	7543
UniProt ID:	<u>P17010</u>
Cytogenetics:	Xp22.11
Protein Families:	Transcription Factors
MW:	90.5 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Gene Summary:This gene on the X chromosome is structurally similar to a related gene on the Y
chromosome. It encodes a member of the krueppel C2H2-type zinc-finger protein family. The
full-length protein contains an acidic transcriptional activation domain (AD), a nuclear
localization sequence (NLS) and a DNA binding domain (DBD) consisting of 13 C2H2-type zinc
fingers. Studies in mouse embryonic and adult hematopoietic stem cells showed that this
gene was required as a transcriptional regulator for self-renewal of both stem cell types, but
it was dispensable for growth and differentiation of their progeny. Multiple alternatively
spliced transcript variants encoding different isoforms have been identified, but the full-
length nature of some variants has not been determined. [provided by RefSeq, May 2010]
