Gene Summary:This gene encodes a transmembrane protein that contains a large extracellular domain with<br/>multiple polycystic kidney disease (PKD) domains. The encoded protein may play a role in the<br/>development of the cerebral cortex by regulating neuronal migration and cell adhesion.<br/>Single nucleotide polymorphisms in this gene are associated with dyslexia. Alternatively<br/>spliced transcript variants encoding multiple isoforms have been observed for this gene.<br/>[provided by RefSeq, Nov 2011]
