SLC4A10 (NM_001178016) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: SLC4A10 (NM 001178016) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: SLC4A10

Synonyms: NBCn2; NCBE

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Sgfl-Mlul

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC230649).

Sequence:

Restriction Sites: Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_001178016

ORF Size: 3297 bp

SLC4A10 (NM_001178016) Human Tagged Lenti ORF Clone - RC230649L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001178016.1</u>, <u>NP 001171487.1</u>

 RefSeq ORF:
 3300 bp

 Locus ID:
 57282

 UniProt ID:
 Q6U841

 Cytogenetics:
 2q24.2

Protein Families: Druggable Genome, Transmembrane

MW: 124.2 kDa

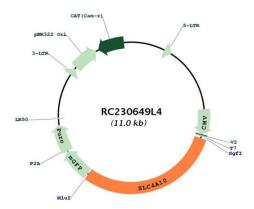

Gene Summary: This gene belongs to a small family of sodium-coupled bicarbonate transporters (NCBTs) that

regulate the intracellular pH of neurons, the secretion of bicarbonate ions across the choroid plexus, and the pH of the brain extracellular fluid. The protein encoded by this gene was initially identified as a sodium-driven chloride bicarbonate exchanger (NCBE) though there is now evidence that its sodium/bicarbonate cotransport activity is independent of any chloride ion countertransport under physiological conditions. This gene is now classified as a member A10 of the SLC4 family of transmembrane solute carriers. Alternative splicing results in

multiple transcript variants encoding distinct isoforms.[provided by RefSeq, May 2010]
