Product datasheet for RC230695L4V

AFF2 (NM_001169123) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	AFF2 (NM_001169123) Human Tagged ORF Clone Lentiviral Particle
Symbol:	AFF2
Synonyms:	FMR2; FMR2P; FRAXE; MRX2; OX19; XLID109
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
Tag:	mGFP
ACCN:	NM_001169123
ORF Size:	3903 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC230695).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 001169123.1</u>
RefSeq ORF:	3906 bp
Locus ID:	2334
UniProt ID:	<u>P51816</u>
Cytogenetics:	Xq28
Protein Families:	Druggable Genome
MW:	144.1 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Gene Summary:This gene encodes a putative transcriptional activator that is a member of the AF4\FMR2
gene family. This gene is associated with the folate-sensitive fragile X E locus on chromosome
X. A repeat polymorphism in the fragile X E locus results in silencing of this gene causing
Fragile X E syndrome. Fragile X E syndrome is a form of nonsyndromic X-linked cognitive
disability. In addition, this gene contains 6-25 GCC repeats that are expanded to >200 repeats
in the disease state. Alternate splicing results in multiple transcript variants.[provided by
RefSeq, Jul 2016]
