

Product datasheet for RC231060

MR1 (NM 001195035) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: MR1 (NM_001195035) Human Tagged ORF Clone

Tag: Myc-DDK

Symbol: MR1

Synonyms: HLALS

Vector: pCMV6-Entry (PS100001)

E. coli Selection: Kanamycin (25 ug/mL)

Cell Selection: Neomycin

ORF Nucleotide >RC231060 representing NM_001195035
Sequence: Red=Cloning site Blue=ORF Green=Tags(s)

Restriction Sites:

Sgfl-Mlul

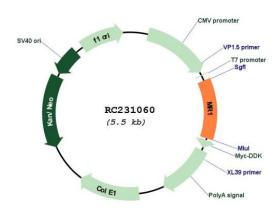

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

Plasmid Map:

ACCN: NM_001195035

ORF Size: 642 bp

MR1 (NM_001195035) Human Tagged ORF Clone - RC231060

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001195035.1</u>, <u>NP 001181964.1</u>

 RefSeq ORF:
 645 bp

 Locus ID:
 3140

 UniProt ID:
 Q95460

 Cytogenetics:
 1q25.3

Protein Families: Transmembrane

MW: 25.6 kDa

Gene Summary: MAIT (mucosal-associated invariant T-cells) lymphocytes represent a small population of T-

cells primarily found in the gut. The protein encoded by this gene is an antigen-presenting molecule that presents metabolites of microbial vitamin B to MAITs. This presentation may activate the MAITs to regulate the amounts of specific types of bacteria in the gut. Several transcript variants encoding different isoforms have been found for this gene, and a pseudogene of it has been detected about 36 kbp upstream on the same chromosome.
