## Product datasheet for RC231418L4V

## CARS (CARS1) (NM\_001194997) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

Product Type:	Lentiviral Particles
Product Name:	CARS (CARS1) (NM_001194997) Human Tagged ORF Clone Lentiviral Particle
Symbol:	CARS1
Synonyms:	CARS; CYSRS; MCDDBH; MDBH; MGC:11246
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
Tag:	mGFP
ACCN:	NM_001194997
ORF Size:	2427 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC231418).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 001194997.1</u>
RefSeq ORF:	2430 bp
Locus ID:	833
Cytogenetics:	11p15.4
Protein Families:	Druggable Genome
Protein Pathways:	Aminoacyl-tRNA biosynthesis
MW:	92.5 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Gene Summary:This gene encodes a class 1 aminoacyl-tRNA synthetase, cysteinyl-tRNA synthetase. Each of<br/>the twenty aminoacyl-tRNA synthetases catalyzes the aminoacylation of a specific tRNA or<br/>tRNA isoaccepting family with the cognate amino acid. This gene is one of several located<br/>near the imprinted gene domain on chromosome 11p15.5, an important tumor-suppressor<br/>gene region. Alterations in this region have been associated with Beckwith-Wiedemann<br/>syndrome, Wilms tumor, rhabdomyosarcoma, adrenocortical carcinoma, and lung, ovarian<br/>and breast cancers. Alternative splicing of this gene results in multiple transcript variants.<br/>[provided by RefSeq, Aug 2010]
