## Leptin Receptor (LEPR) (NM 001198688) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

Product Name: Leptin Receptor (LEPR) (NM\_001198688) Human Tagged ORF Clone Lentiviral Particle

Symbol: LEPR

Synonyms: CD295; LEP-R; LEPRD; OB-R; OBR

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_001198688

ORF Size: 2718 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC231439).

Sequence:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeq:** NM 001198688.1, NP 001185617.1

 RefSeq ORF:
 2721 bp

 Locus ID:
 3953

 UniProt ID:
 P48357

 Cytogenetics:
 1p31.3

**Protein Families:** Druggable Genome, Secreted Protein, Transmembrane

**Protein Pathways:** Adipocytokine signaling pathway, Cytokine-cytokine receptor interaction, Jak-STAT signaling

pathway, Neuroactive ligand-receptor interaction

Leptin Receptor (LEPR) (NM\_001198688) Human Tagged ORF Clone Lentiviral Particle – RC231439L4V

MW:

103.9 kDa

**Gene Summary:** 

The protein encoded by this gene belongs to the gp130 family of cytokine receptors that are known to stimulate gene transcription via activation of cytosolic STAT proteins. This protein is a receptor for leptin (an adipocyte-specific hormone that regulates body weight), and is involved in the regulation of fat metabolism, as well as in a novel hematopoietic pathway that is required for normal lymphopoiesis. Mutations in this gene have been associated with obesity and pituitary dysfunction. Alternatively spliced transcript variants encoding different isoforms have been described for this gene. It is noteworthy that this gene and LEPROT gene (GenelD:54741) share the same promoter and the first 2 exons, however, encode distinct proteins (PMID:9207021).[provided by RefSeq, Nov 2010]
