### Teashirt homolog 2 (TSHZ2) (NM\_001193421) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** Teashirt homolog 2 (TSHZ2) (NM\_001193421) Human Tagged ORF Clone Lentiviral Particle

**Symbol:** Teashirt homolog 2

Synonyms: C20orf17; OVC10-2; TSH2; ZABC2; ZNF218

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

**ACCN:** NM\_001193421

ORF Size: 3093 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC231458).

Sequence:
OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeq:** NM 001193421.1, NP 001180350.1

 RefSeq ORF:
 3096 bp

 Locus ID:
 128553

 UniProt ID:
 Q9NRE2

 Cytogenetics:
 20q13.2

 MW:
 115 kDa

# Teashirt homolog 2 (TSHZ2) (NM\_001193421) Human Tagged ORF Clone Lentiviral Particle – RC231458L3V

#### **Gene Summary:**

This gene is a member of the teashirt C2H2-type zinc-finger protein family of transcription factors. This gene encodes a protein with five C2H2-type zinc fingers, a homeobox DNA-binding domain and a coiled-coil domain. This nuclear protein is predicted to act as a transcriptional repressor. This gene is thought to play a role in the development and progression of breast and other types of cancer. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Dec 2016]
