## DCTN1 (NM\_001190837) Human Tagged Lenti ORF Clone

#### **Product data:**

**Product Type:** Expression Plasmids

Product Name: DCTN1 (NM\_001190837) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: DCTN1

Symbol: DCTN1

**Synonyms:** DAP-150; DP-150; P135

Mammalian Cell

Selection:

Vector:

pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC231480).

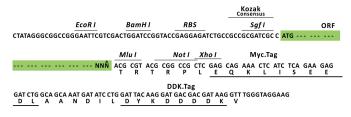

Sequence:

Sgfl-Mlul

Puromycin

Restriction Sites: Cloning Scheme:

<sup>\*</sup> The last codon before the Stop codon of the ORF.

**ACCN:** NM\_001190837

ORF Size: 3813 bp

### DCTN1 (NM\_001190837) Human Tagged Lenti ORF Clone - RC231480L3

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 001190837.1</u>

 RefSeq ORF:
 3816 bp

 Locus ID:
 1639

 UniProt ID:
 Q14203

 Cytogenetics:
 2p13.1

**Protein Families:** Druggable Genome

**Protein Pathways:** Huntington's disease

MW: 141.3 kDa

**Gene Summary:** This gene encodes the largest subunit of dynactin, a macromolecular complex consisting of

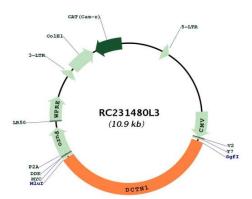

10 subunits ranging in size from 22 to 150 kD. Dynactin binds to both microtubules and cytoplasmic dynein. Dynactin is involved in a diverse array of cellular functions, including ER-to-Golgi transport, the centripetal movement of lysosomes and endosomes, spindle formation, chromosome movement, nuclear positioning, and axonogenesis. This subunit interacts with dynein intermediate chain by its domains directly binding to dynein and binds to microtubules via a highly conserved glycine-rich cytoskeleton-associated protein (CAP-Gly) domain in its N-terminus. Alternative splicing of this gene results in multiple transcript variants encoding distinct isoforms. Mutations in this gene cause distal hereditary motor

neuronopathy type VIIB (HMN7B) which is also known as distal spinal and bulbar muscular

atrophy (dSBMA). [provided by RefSeq, Oct 2008]
