

Product datasheet for **RC233161**

STATIP1 (ELP2) (NM_001242875) Human Tagged ORF Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	STATIP1 (ELP2) (NM_001242875) Human Tagged ORF Clone
Tag:	Myc-DDK
Symbol:	STATIP1
Synonyms:	MRT58; SHINC-2; STATIP1; StIP
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)

[View online »](#)

**ORF Nucleotide
Sequence:**

>RC233161 representing NM_001242875

Restriction Sites:

SgfI-MluI

Cloning Scheme:

ACCN: NM_001242875

ORF Size:	2673 bp
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
Note:	Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um filter is required.
RefSeq:	NM_001242875.3
RefSeq Size:	2847 bp
RefSeq ORF:	2676 bp
Locus ID:	55250
UniProt ID:	Q6IA86
Cytogenetics:	18q12.2
MW:	100.4 kDa
Gene Summary:	The protein encoded by this gene is a core subunit of the elongator complex, a histone acetyltransferase complex that associates with RNA polymerase II. In addition to histone acetylation, the encoded protein effects transcriptional elongation and may help remodel chromatin. [provided by RefSeq, May 2016]
