Cytokeratin 8 (KRT8) (NM_001256282) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Cytokeratin 8 (KRT8) (NM_001256282) Human Tagged ORF Clone

Tag: Myc-DDK

Symbol: KRT8

Synonyms: CARD2; CK-8; CK8; CYK8; K2C8; K8; KO

Sgfl-Mlul

Mammalian Cell Neomycin

Selection:

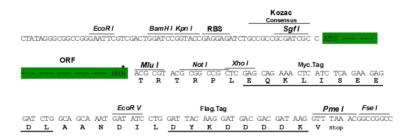

Vector: pCMV6-Entry (PS100001)

E. coli Selection: Kanamycin (25 ug/mL)

Restriction Sites: Cloning Scheme:

Cloning sites used for ORF Shuttling:

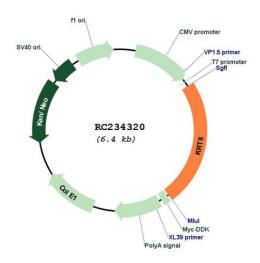

^{*} The last codon before the Stop codon of the ORF

Plasmid Map:

ACCN: NM_001256282

ORF Size: 1533 bp

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001256282.2</u>

Cytokeratin 8 (KRT8) (NM_001256282) Human Tagged ORF Clone - RC234320

RefSeq Size:1807 bpRefSeq ORF:1536 bpLocus ID:3856

Cytogenetics: 12q13.13

Protein Families: Druggable Genome

MW: 57.1 kDa

Gene Summary: This gene is a member of the type II keratin family clustered on the long arm of chromosome

12. Type I and type II keratins heteropolymerize to form intermediate-sized filaments in the cytoplasm of epithelial cells. The product of this gene typically dimerizes with keratin 18 to form an intermediate filament in simple single-layered epithelial cells. This protein plays a role in maintaining cellular structural integrity and also functions in signal transduction and cellular differentiation. Mutations in this gene cause cryptogenic cirrhosis. Alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Jan 2012]
