

Product datasheet for RC236637

NAA40 (NM_001300800) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: NAA40 (NM_001300800) Human Tagged ORF Clone

Tag: Myc-DDK Symbol: NAA40

Synonyms: hNatD; NAT11; NatD; PATT1

Mammalian Cell Neomycin

Selection:

Vector: pCMV6-Entry (PS100001)

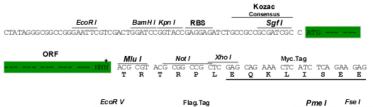

E. coli Selection: Kanamycin (25 ug/mL)

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

ACCN: NM_001300800

ORF Size: 648 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

^{*} The last codon before the Stop codon of the ORF

NAA40 (NM_001300800) Human Tagged ORF Clone - RC236637

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with

0.22um filter is required.

RefSeq: <u>NM 001300800.1</u>, <u>NP 001287729.1</u>

RefSeq Size: 3752 bp
RefSeq ORF: 651 bp
Locus ID: 79829
UniProt ID: Q86UY6

Cytogenetics: 11q13.1

MW: 25.2 kDa

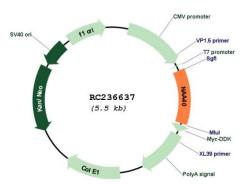

Gene Summary: N-alpha-acetyltransferase that specifically mediates the acetylation of the N-terminal residues

of histones H4 and H2A (PubMed:21935442, PubMed:25619998). In contrast to other N-alpha-acetyltransferase, has a very specific selectivity for histones H4 and H2A N-terminus and specifically recognizes the 'Ser-Gly-Arg-Gly sequence' (PubMed:21935442, PubMed:25619998). Acts as a negative regulator of apoptosis (PubMed:26666750). May play a role in hepatic lipid

metabolism (By similarity).[UniProtKB/Swiss-Prot Function]
