

Product datasheet for RC238839

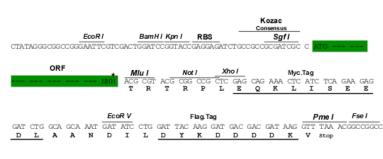

GPR161 (NM 001267611) Human Tagged ORF Clone

Product data:

Tag:

Product Type: **Expression Plasmids Product Name:** GPR161 (NM 001267611) Human Tagged ORF Clone Myc-DDK Symbol: GPR161 RE2 Synonyms: **Mammalian Cell** Neomycin Selection: Vector: pCMV6-Entry (PS100001) E. coli Selection: Kanamycin (25 ug/mL) **Restriction Sites:** Sgfl-Mlul Cloning sites used for ORF Shuttling: **Cloning Scheme:**

* The last codon before the Stop codon of the ORF

ACCN: **ORF Size:** NM_001267611 1638 bp

	51 (NM_001267611) Human Tagged ORF Clone – RC238839
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	 Centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 001267611.1, NP 001254540.1</u>
RefSeq Size:	7815 bp
RefSeq ORF:	1641 bp
Locus ID:	23432
Cytogenetics:	1q24.2
Protein Families:	Druggable Genome, GPCR, Transmembrane
MW:	60.9 kDa
Gene Summary:	The protein encoded by this gene is an orphan G protein-coupled receptor whose ligand is unknown. This gene is overexpressed in triple-negative breast cancer, and disruption of this gene slows the proliferation of basal breast cancer cells. Therefore, this gene is a potential drug target for triple-negative breast cancer. [provided by RefSeq, Mar 2017]
