| Product Type:                | Mutant ORF Clones                                                                                                                |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Product Name:                | PTEN (NM_000314) Human Mutant ORF Clone                                                                                          |
| Mutation Description:        | R233*                                                                                                                            |
| Affected Codon#:             | 233                                                                                                                              |
| Affected NT#:                | c.697                                                                                                                            |
| Nucleotide Mutation:         | PTEN Mutant (R233*), Myc-DDK-tagged ORF clone of Homo sapiens phosphatase and tensin<br>homolog (PTEN) as transfection-ready DNA |
| Effect:                      | Truncation                                                                                                                       |
| Symbol:                      | PTEN                                                                                                                             |
| Synonyms:                    | 10q23del; BZS; CWS1; DEC; GLM2; MHAM; MMAC1; PTEN1; PTENbeta; TEP1                                                               |
| E. coli Selection:           | Kanamycin (25 ug/mL)                                                                                                             |
| Mammalian Cell<br>Selection: | Neomycin                                                                                                                         |
| Vector:                      | pCMV6-Entry (PS100001)                                                                                                           |
| Tag:                         | Myc-DDK                                                                                                                          |
| ACCN:                        | NM_000314                                                                                                                        |
| ORF Size:                    | 696 bp                                                                                                                           |
| <b>Restriction Sites:</b>    | Sgfl-Mlul                                                                                                                        |

## **PTEN (NM\_000314) Human Mutant ORF Clone – RC400424**

| OTI Disclaimer:   | Due to the inherent nature of this plasmid, standard methods to replicate additional amounts<br>of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore,<br>OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts<br>of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a<br>reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by<br>calling 301.340.3188 option 3 for pricing and delivery.<br>The molecular sequence of this clone aligns with the gene accession number as a point of<br>reference only. However, individual transcript sequences of the same gene can differ through<br>naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This<br>clone is substantially in agreement with the reference, but a complete review of all prevailing<br>variants is recommended prior to use. <u>More info</u> |

| OTI Annotation:   | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Components:       | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

#### **PTEN (NM\_000314) Human Mutant ORF Clone – RC400424**

Gene Summary:This gene was identified as a tumor suppressor that is mutated in a large number of cancers<br/>at high frequency. The protein encoded by this gene is a phosphatidylinositol-3,4,5-<br/>trisphosphate 3-phosphatase. It contains a tensin like domain as well as a catalytic domain<br/>similar to that of the dual specificity protein tyrosine phosphatases. Unlike most of the<br/>protein tyrosine phosphatases, this protein preferentially dephosphorylates phosphoinositide<br/>substrates. It negatively regulates intracellular levels of phosphatidylinositol-3,4,5-<br/>trisphosphate in cells and functions as a tumor suppressor by negatively regulating AKT/PKB<br/>signaling pathway. The use of a non-canonical (CUG) upstream initiation site produces a<br/>longer isoform that initiates translation with a leucine, and is thought to be preferentially<br/>associated with the mitochondrial inner membrane. This longer isoform may help regulate<br/>energy metabolism in the mitochondria. A pseudogene of this gene is found on chromosome<br/>9. Alternative splicing and the use of multiple translation start codons results in multiple<br/>transcript variants encoding different isoforms. [provided by RefSeq, Feb 2015]
