

## **Product datasheet for RG202373**

## LSM6 (NM 007080) Human Tagged ORF Clone

**Product data:** 

**Product Type:** Expression Plasmids

Product Name: LSM6 (NM\_007080) Human Tagged ORF Clone

Tag: TurboGFP

Symbol: LSM6

Synonyms: YDR378C

Mammalian Cell Selection:

Neomycin

**Vector:** pCMV6-AC-GFP (PS100010)

E. coli Selection: Ampicillin (100 ug/mL)

ORF Nucleotide >RG202373 representing NM\_007080

Sequence: Red=Cloning site Blue=ORF Green=Tags(s)

## **Cloning Scheme:**

**ACCN:** NM\_007080

ORF Size: 240 bp

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 007080.3</u>

RefSeq Size: 596 bp

 RefSeq ORF:
 243 bp

 Locus ID:
 11157

 UniProt ID:
 P62312

 Cytogenetics:
 4q31.22

 Domains:
 Sm

**Protein Families:** Stem cell - Pluripotency

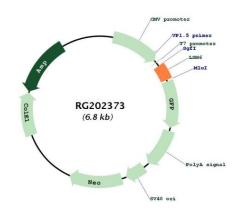

**Protein Pathways:** RNA degradation, Spliceosome

Gene Summary: Sm-like proteins were identified in a variety of organisms based on sequence homology with

the Sm protein family (see SNRPD2; MIM 601061). Sm-like proteins contain the Sm sequence motif, which consists of 2 regions separated by a linker of variable length that folds as a loop. The Sm-like proteins are thought to form a stable heteromer present in tri-snRNP particles,

which are important for pre-mRNA splicing.[supplied by OMIM, Apr 2004]
