

Product datasheet for RG204036

PACS1 (NM_018026) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: PACS1 (NM_018026) Human Tagged ORF Clone

Tag: TurboGFP

Symbol: PACS1

Synonyms: MRD17; SHMS

Mammalian Cell Neomycin

Selection:

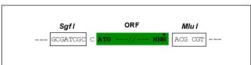

Vector: pCMV6-AC-GFP (PS100010)

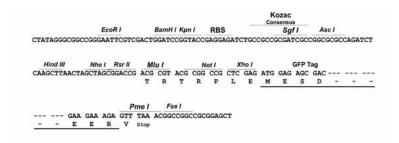

E. coli Selection: Ampicillin (100 ug/mL)

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

Cloning sites used for ORF Shuttling:

ACCN: NM_018026

ORF Size: 2889 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

PACS1 (NM_018026) Human Tagged ORF Clone - RG204036

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with

0.22um filter is required.

RefSeq: <u>NM 018026.4</u>

RefSeq Size: 4511 bp
RefSeq ORF: 2892 bp
Locus ID: 55690
UniProt ID: Q6VY07

Cytogenetics: 11q13.1-q13.2

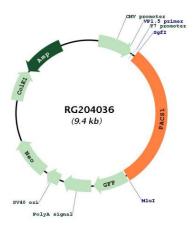

Gene Summary: This gene encodes a protein with a putative role in the localization of trans-Golgi network

(TGN) membrane proteins. Mouse and rat homologs have been identified and studies of the homologous rat protein indicate a role in directing TGN localization of furin by binding to the protease's phosphorylated cytosolic domain. In addition, the human protein plays a role in HIV-1 Nef-mediated downregulation of cell surface MHC-I molecules to the TGN, thereby

enabling HIV-1 to escape immune surveillance. [provided by RefSeq, Jul 2008]
