

Product datasheet for RG205553

LRRC8B (NM_015350) Human Tagged ORF Clone

NM_015350

2409 bp

Product data:

Tag:

Symbol:

Synonyms:

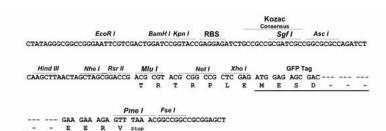

Selection: Vector:

Product Type: **Expression Plasmids Product Name:** LRRC8B (NM_015350) Human Tagged ORF Clone TurboGFP LRRC8B TA-LRRP; TALRRP **Mammalian Cell** Neomycin pCMV6-AC-GFP (PS100010) E. coli Selection: Ampicillin (100 ug/mL) **Restriction Sites:** Sgfl-Mlul

Cloning Scheme:

Cloning sites used for ORF Shuttling:

ACCN: **ORF Size:**

CRUCENE LRRC8B (NM_015350) Human Tagged ORF Clone – RG205553 CTL Disclaimer:

OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	 Centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 015350.1, NP 056165.1</u>
RefSeq Size:	3588 bp
RefSeq ORF:	2412 bp
Locus ID:	23507
UniProt ID:	0.00077
	<u>Q6P9F7</u>
Cytogenetics:	<u>Q6P9F7</u> 1p22.2
Cytogenetics: Domains:	
	1p22.2
Domains:	1p22.2 LRR
Domains: Protein Families:	1p22.2 LRR Transmembrane Non-essential component of the volume-regulated anion channel (VRAC, also named VSOAC channel), an anion channel required to maintain a constant cell volume in response to extracellular or intracellular osmotic changes (PubMed:24790029, PubMed:26824658, PubMed:28193731). The VRAC channel conducts iodide better than chloride and can also conduct organic osmolytes like taurine. Channel activity requires LRRC8A plus at least one other family member (LRRC8B, LRRC8C, LRRC8D or LRRC8E); channel characteristics depend on the precise subunit composition (PubMed:24790029, PubMed:26824658,
