

Product datasheet for RG212203

Agrin (AGRN) (NM_198576) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Agrin (AGRN) (NM_198576) Human Tagged ORF Clone

Tag: TurboGFP

Symbol: Agrin

Synonyms: AGRIN; CMS8; CMSPPD

Mammalian Cell Neomycin

Selection:

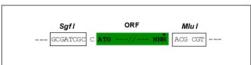

Vector: pCMV6-AC-GFP (PS100010)

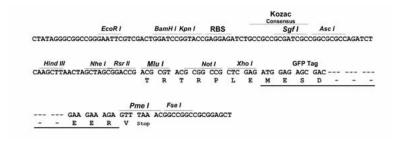

E. coli Selection: Ampicillin (100 ug/mL)

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

Cloning sites used for ORF Shuttling:

ACCN: NM_198576

ORF Size: 6135 bp

Agrin (AGRN) (NM_198576) Human Tagged ORF Clone - RG212203

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with

0.22um filter is required.

RefSeq: <u>NM 198576.2</u>, <u>NP 940978.2</u>

 RefSeq Size:
 7319 bp

 RefSeq ORF:
 6138 bp

 Locus ID:
 375790

 UniProt ID:
 000468

Cytogenetics: 1p36.33

Protein Pathways: ECM-receptor interaction

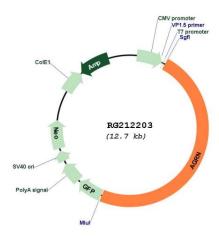

Gene Summary: This gene encodes one of several proteins that are critical in the development of the

neuromuscular junction (NMJ), as identified in mouse knock-out studies. The encoded protein contains several laminin G, Kazal type serine protease inhibitor, and epidermal growth factor domains. Additional post-translational modifications occur to add glycosaminoglycans and disulfide bonds. In one family with congenital myasthenic syndrome affecting limb-girdle muscles, a mutation in this gene was found. Alternative splicing results in multiple transcript

variants encoding different isoforms. [provided by RefSeq, Mar 2015]
