

Product datasheet for RG221586

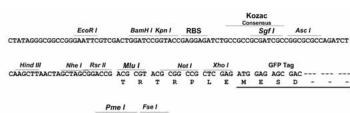

MYT1L (NM_015025) Human Tagged ORF Clone

Product data:

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	MYT1L (NM_015025) Human Tagged ORF Clone
Tag:	TurboGFP
Symbol:	MYT1L
Synonyms:	MRD39; myT1-L; NZF1; ZC2H2C2; ZC2HC4B
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-AC-GFP (PS100010)
E. coli Selection:	Ampicillin (100 ug/mL)
Restriction Sites:	Sgfl-Notl
Cloning Scheme:	Cloning sites used for ORF Shuttling:
	Sgfi ORF Noti GCGATCGC C ATG XXXX AC G CGG CCG C TC

---- GAA GAA AGA GTT TAA ACGGCCGGCCGCGGAGCT - - E E R V Stop

NM_015025

3552 bp

Second Content of the second s

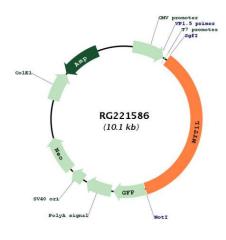

OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	 Centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 015025.2</u> , <u>NP 055840.2</u>
RefSeq Size:	7152 bp
RefSeq ORF:	3555 bp
Locus ID:	23040
UniProt ID:	<u>Q9UL68</u>
Cytogenetics:	2p25.3
Protein Families:	Transcription Factors

Section 221586 MYT1L (NM_015025) Human Tagged ORF Clone – RG221586

Gene Summary:This gene encodes a member of the zinc finger superfamily of transcription factors whose
expression, thus far, has been found only in neuronal tissues. The encoded protein belongs
to a novel class of cystein-cystein-histidine-cystein zinc finger proteins that function in the
developing mammalian central nervous system. Forced expression of this gene in
combination with the basic helix-loop-helix transcription factor NeuroD1 and the transcription
factors POU class 3 homeobox 2 and achaete-scute family basic helix-loop-helix transcription
factor 1 can convert fetal and postnatal human fibroblasts into induced neuronal cells, which
are able to generate action potentials. Mutations in this gene have been associated with an
autosomal dominant form of cognitive disability and with autism spectrum disorder.
Alternative splicing results in multiple variants. [provided by RefSeq, Jul 2017]
