

Product datasheet for RG222409

BAX (NM_138763) Human Tagged ORF Clone

Product data:

OriGene Technologies, Inc.

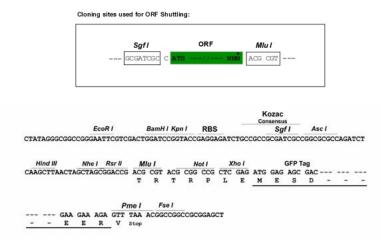

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids	
Product Name:	BAX (NM_138763) Human Tagged ORF Clone	
Tag:	TurboGFP	
Symbol:	BAX	
Synonyms:	BCL2L4	
Mammalian Cell Selection:	Neomycin	
Vector:	pCMV6-AC-GFP (PS100010)	
E. coli Selection:	Ampicillin (100 ug/mL)	
ORF Nucleotide Sequence:	<pre>>RG222409 representing NM_138763 Red=Cloning site Blue=ORF Green=Tags(s)</pre>

Sorigene BAX (NM_138763) Human Tagged ORF Clone – RG222409		
Cytogenetics:	19q13.33	
Protein Families:	Druggable Genome, Transmembrane	
Protein Pathways:	Amyotrophic lateral sclerosis (ALS), Apoptosis, Colorectal cancer, Huntington's disease, Neurotrophin signaling pathway, p53 signaling pathway, Pathways in cancer, Prion diseases	
Gene Summary:	The protein encoded by this gene belongs to the BCL2 protein family. BCL2 family members form hetero- or homodimers and act as anti- or pro-apoptotic regulators that are involved in a wide variety of cellular activities. This protein forms a heterodimer with BCL2, and functions as an apoptotic activator. The association and the ratio of BAX to BCL2 also determines survival or death of a cell following an apoptotic stimulus. This protein is reported to interact with, and increase the opening of, the mitochondrial voltage-dependent anion channel (VDAC), which leads to the loss in membrane potential and the release of cytochrome c. The expression of this gene is regulated by the tumor suppressor P53 and has been shown to be involved in P53-mediated apoptosis. Multiple alternatively spliced transcript variants, which encode different isoforms, have been reported for this gene. [provided by RefSeq, Dec 2019]
