

Product datasheet for RG223262

CD11c (ITGAX) (NM_000887) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CD11c (ITGAX) (NM_000887) Human Tagged ORF Clone

Tag: TurboGFP

Symbol: CD11c

Synonyms: CD11C; SLEB6

Mammalian Cell Neomycin

Selection:

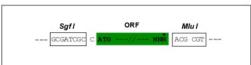

Vector: pCMV6-AC-GFP (PS100010)

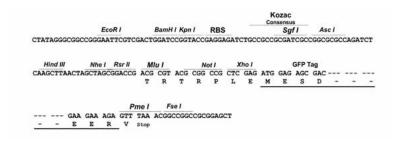

E. coli Selection: Ampicillin (100 ug/mL)

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

Cloning sites used for ORF Shuttling:

ACCN: NM_000887

ORF Size: 3489 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

CD11c (ITGAX) (NM_000887) Human Tagged ORF Clone - RG223262

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000887.3, NP 000878.2</u>

 RefSeq Size:
 4666 bp

 RefSeq ORF:
 3492 bp

 Locus ID:
 3687

 UniProt ID:
 P20702

Cytogenetics: 16p11.2

Protein Families: Druggable Genome, Transmembrane

Protein Pathways: Regulation of actin cytoskeleton

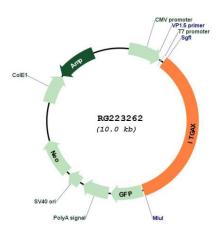

Gene Summary: This gene encodes the integrin alpha X chain protein. Integrins are heterodimeric integral

membrane proteins composed of an alpha chain and a beta chain. This protein combines with the beta 2 chain (ITGB2) to form a leukocyte-specific integrin referred to as inactivated-C3b (iC3b) receptor 4 (CR4). The alpha X beta 2 complex seems to overlap the properties of the alpha M beta 2 integrin in the adherence of neutrophils and monocytes to stimulated endothelium cells, and in the phagocytosis of complement coated particles. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Nov

2013]
