

## **Product datasheet for RG223386**

### OR2W3 (NM\_001001957) Human Tagged ORF Clone

#### **Product data:**

**Product Type:** Expression Plasmids

**Product Name:** OR2W3 (NM\_001001957) Human Tagged ORF Clone

Tag: TurboGFP Symbol: OR2W3

Synonyms: OR2W3P; OR2W8P; OST718

Mammalian Cell Neomycin

Selection:

**Vector:** pCMV6-AC-GFP (PS100010)

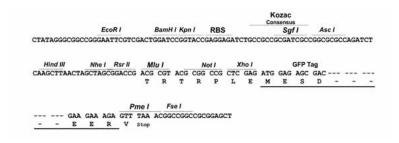

E. coli Selection: Ampicillin (100 ug/mL)

**Restriction Sites:** Sgfl-Mlul

**Cloning Scheme:** 

Cloning sites used for ORF Shuttling:

**ACCN:** NM\_001001957

ORF Size: 942 bp

**OriGene Technologies, Inc.** 9620 Medical Center Drive, Ste 200

#### OR2W3 (NM\_001001957) Human Tagged ORF Clone - RG223386

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**Note:** Plasmids are not sterile. For experiments where strict sterility is required, filtration with

0.22um filter is required.

**RefSeq:** <u>NM 001001957.2</u>, <u>NP 001001957.2</u>

 RefSeq Size:
 945 bp

 RefSeq ORF:
 945 bp

 Locus ID:
 343171

 UniProt ID:
 Q7Z3T1

Cytogenetics: 1q44

**Protein Families:** Druggable Genome, Transmembrane

**Protein Pathways:** Olfactory transduction

**Gene Summary:** Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal

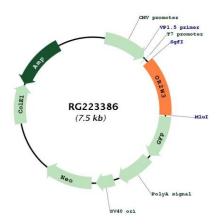

response that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and hormone receptors and are responsible for the recognition and G protein-mediated transduction of odorant signals. The olfactory receptor gene family is the

proteins for this organism is independent of other organisms. [provided by RefSeq, Jul 2008]

largest in the genome. The nomenclature assigned to the olfactory receptor genes and
