# Nck beta (NCK2) (NM 001004722) Human Tagged ORF Clone

**Product data:** 

**Product Type:** Expression Plasmids

Product Name: Nck beta (NCK2) (NM 001004722) Human Tagged ORF Clone

Tag: TurboGFP

Symbol: NCK2

Synonyms: GRB4; NCKbeta

Mammalian Cell Neomycin

Selection:

**Vector:** pCMV6-AC-GFP (PS100010)

E. coli Selection: Ampicillin (100 ug/mL)

ORF Nucleotide >RG223926 representing NM\_001004722 Sequence: Red=Cloning site Blue=ORF Green=Tags(s)

#### **Cloning Scheme:**

#### Plasmid Map:

**ACCN:** NM\_001004722

ORF Size: 249 bp

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

## Nck beta (NCK2) (NM\_001004722) Human Tagged ORF Clone - RG223926

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001004722.3</u>, <u>NP 001004722.1</u>

RefSeq Size: 1795 bp
RefSeq ORF: 252 bp
Locus ID: 8440
Cytogenetics: 2q12.2

**Protein Families:** Druggable Genome

**Protein Pathways:** Axon guidance, ErbB signaling pathway, Pathogenic Escherichia coli infection, T cell receptor

signaling pathway

**Gene Summary:** This gene encodes a member of the NCK family of adaptor proteins. The protein contains

three SH3 domains and one SH2 domain. The protein has no known catalytic function but has

been shown to bind and recruit various proteins involved in the regulation of receptor protein tyrosine kinases. It is through these regulatory activities that this protein is believed

to be involved in cytoskeletal reorganization. Alternate transcriptional splice variants, encoding different isoforms, have been characterized. [provided by RefSeq, Jul 2008]
