### Filamin B (FLNB) (NM\_001164317) Human Tagged ORF Clone

#### **Product data:**

**Product Type:** Expression Plasmids

**Product Name:** Filamin B (FLNB) (NM\_001164317) Human Tagged ORF Clone

Tag: TurboGFP Symbol: Filamin B

Synonyms: ABP-278; ABP-280; AOI; FH1; FLN-B; FLN1L; LRS1; SCT; TABP; TAP

Mammalian Cell

Selection:

Neomycin

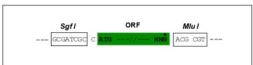

**Vector:** pCMV6-AC-GFP (PS100010)

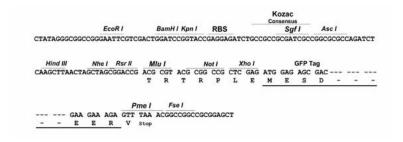

E. coli Selection: Ampicillin (100 ug/mL)

**Restriction Sites:** Sgfl-Mlul

**Cloning Scheme:** 

**ACCN:** NM\_001164317

ORF Size: 7899 bp

#### Filamin B (FLNB) (NM\_001164317) Human Tagged ORF Clone - RG228713

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

> reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

NM 001164317.2 RefSeq:

RefSeq Size: 9560 bp RefSeq ORF: 7902 bp Locus ID: 2317

075369 Cytogenetics: 3p14.3

UniProt ID:

**Protein Pathways:** Focal adhesion, MAPK signaling pathway

**Gene Summary:** This gene encodes a member of the filamin family. The encoded protein interacts with

> glycoprotein lb alpha as part of the process to repair vascular injuries. The platelet glycoprotein Ib complex includes glycoprotein Ib alpha, and it binds the actin cytoskeleton. Mutations in this gene have been found in several conditions: atelosteogenesis type 1 and

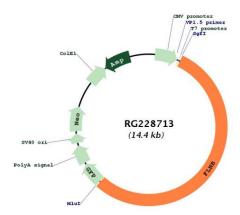

type 3; boomerang dysplasia; autosomal dominant Larsen syndrome; and

spondylocarpotarsal synostosis syndrome. Multiple alternatively spliced transcript variants that encode different protein isoforms have been described for this gene. [provided by

RefSeq, Nov 2009]
