

Product datasheet for RG233518

RTBDN (NM_001270441) Human Tagged ORF Clone

Product data:

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	RTBDN (NM_001270441) Human Tagged ORF Clone
Tag:	TurboGFP
Symbol:	RTBDN
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-AC-GFP (PS100010)
E. coli Selection:	Ampicillin (100 ug/mL)
ORF Nucleotide Sequence:	<pre>>RG233518 representing NM_001270441 Red=Cloning site Blue=ORF Green=Tags(s)</pre>

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

This clone was engineered to express the complete ORF with an expression tag. Expression

The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

	RTBDN (NM_001270441) Human Tagged ORF Clone – RG233518
Cytogenetics:	19p13.13
Protein Families:	Druggable Genome, Secreted Protein
Gene Summary:	This gene was first identified in a study of human eye tissues. The protein encoded by this gene is preferentially expressed in the retina and may play a role in binding retinoids and other carotenoids as it shares homology with riboflavin binding proteins. Alternative splicing results in multiple transcript variants and protein isoforms. [provided by RefSeq, Jul 2012]
