

Product datasheet for RG234182

SLC16A3 (NM_001206952) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: SLC16A3 (NM_001206952) Human Tagged ORF Clone

Tag: TurboGFP Symbol: SLC16A3

Synonyms: MCT-3; MCT-4; MCT 3; MCT3; MCT 4; MCT4

Mammalian Cell Neomycin

Selection:

Vector: pCMV6-AC-GFP (PS100010)

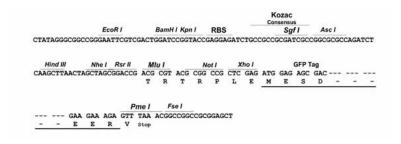

E. coli Selection: Ampicillin (100 ug/mL)

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

Cloning sites used for ORF Shuttling:

ACCN: NM_001206952

ORF Size: 1395 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

SLC16A3 (NM_001206952) Human Tagged ORF Clone - RG234182

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001206952.1, NP 001193881.1</u>

 RefSeq Size:
 2031 bp

 RefSeq ORF:
 1398 bp

 Locus ID:
 9123

 UniProt ID:
 015427

Cytogenetics: 17q25.3

Protein Families: Transmembrane

Gene Summary: Lactic acid and pyruvate transport across plasma membranes is catalyzed by members of the

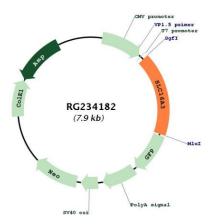

proton-linked monocarboxylate transporter (MCT) family, which has been designated solute carrier family-16. Each MCT appears to have slightly different substrate and inhibitor

specificities and transport kinetics, which are related to the metabolic requirements of the tissues in which it is found. The MCTs, which include MCT1 (SLC16A1; MIM 600682) and MCT2 (SLC16A7; MIM 603654), are characterized by 12 predicted transmembrane domains (Price et

al., 1998 [PubMed 9425115]).[supplied by OMIM, Mar 2008]
