OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

SPAN6 (NM_001278743) Human Tagged ORF Clone – RG235873

Gene Summary:The protein encoded by this gene is a member of the transmembrane 4 superfamily, also
known as the tetraspanin family. Most of these members are cell-surface proteins that are
characterized by the presence of four hydrophobic domains. The proteins mediate signal
transduction events that play a role in the regulation of cell development, activation, growth
and motility. The protein encoded by this gene is a cell surface glycoprotein and is highly
similar in sequence to the transmembrane 4 superfamily member 2 protein. It functions as a
negative regulator of retinoic acid-inducible gene I-like receptor-mediated immune signaling
via its interaction with the mitochondrial antiviral signaling-centered signalosome. This gene
uses alternative polyadenylation sites, and multiple transcript variants result from alternative
splicing. [provided by RefSeq, Jul 2013]
