Cloning Scheme:

- ACCN:** NM_001297651
- ORF Size:** 7287 bp
- OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. [More info](#)
- OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
- Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
- RefSeq:** [NM_001297651.2](#)
- RefSeq Size:** 10219 bp
- RefSeq ORF:** 7290 bp
- Locus ID:** 375449
- UniProt ID:** [O15021](#)
- Cytogenetics:** 5q12.3
- Protein Families:** Druggable Genome, Protein Kinase
- MW:** 265.2 kDa
- Gene Summary:** This gene encodes a member of the microtubule-associated serine/threonine protein kinases. The proteins in this family contain a domain that gives the kinase the ability to determine its own scaffold to control the effects of their kinase activities. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Mar 2014]
