Gene Summary:	This gene encodes a transcription factor that is a member of the nuclear receptor subfamily
	1. The encoded protein is a ligand-sensitive transcription factor that negatively regulates the
	expression of core clock proteins. In particular this protein represses the circadian clock

and cardiovascular processes. [provided by RefSeq, Feb 2014]

transcription factor aryl hydrocarbon receptor nuclear translocator-like protein 1 (Arntl). This protein may also be involved in regulating genes that function in metabolic, inflammatory
