

Product datasheet for RR201509

Cryaa (NM_012534) Rat Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Cryaa (NM_012534) Rat Tagged ORF Clone

Tag: Myc-DDK

Symbol: Cryaa

Synonyms: Acry-1; Crya1

Mammalian Cell Neomycin

Selection:

Vector: pCMV6-Entry (PS100001)

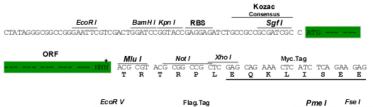

E. coli Selection: Kanamycin (25 ug/mL)

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

Cloning sites used for ORF Shuttling:

ACCN: NM_012534

ORF Size: 519 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

^{*} The last codon before the Stop codon of the ORF

Cryaa (NM_012534) Rat Tagged ORF Clone - RR201509

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

> reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

NM 012534.4, NP 036666.2 RefSeq:

19.8 kDa

RefSeq Size: 1126 bp RefSeq ORF: 522 bp Locus ID: 24273 UniProt ID: P24623

Cytogenetics: 20p12 MW:

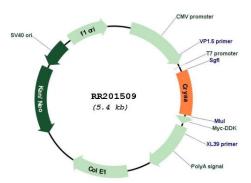

This gene encodes subunit a, one of two subunits of alpha-crystallin, which is a high **Gene Summary:**

> molecular weight, soluble aggregate and is a member of the small heat shock protein family. The encoded protein has been identified as a moonlighting protein based on its ability to perform mechanistically distinct functions. It acts as a molecular chaperone and is the major protein in the eye lens, maintaining the transparency and refractive index of the lens.

Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jan 2014]
