Gene Summary:This gene encodes a member of the G-protein coupled receptor family. The encoded protein
is a receptor for corticotropin-releasing factor (CRH) and urocortin (UCN). The interaction of
this protein with CRH and UCN triggers G-protein coupled signaling. This protein plays a
pivotal role in mediating the CRH-elicited effects in depression and anxiety. Alternatively
spliced transcript variants have been found for this gene. [provided by RefSeq, Sep 2014]
