

# Product datasheet for RR206817L4V

## Afap1 (NM\_080900) Rat Tagged ORF Clone Lentiviral Particle

### **Product data:**

#### **Product Type: Lentiviral Particles Product Name:** Afap1 (NM\_080900) Rat Tagged ORF Clone Lentiviral Particle Symbol: Afap1 Synonyms: Afap **Mammalian Cell** Puromycin Selection: Vector: pLenti-C-mGFP-P2A-Puro (PS100093) mGFP Tag: NM 080900 ACCN: ORF Size: 2193 bp The ORF insert of this clone is exactly the same as(RR206817). **ORF** Nucleotide Sequence: **OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info **OTI** Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. **RefSeq:** NM 080900.1, NP 543176.1 **RefSeq Size:** 2911 bp **RefSeq ORF:** 2196 bp Locus ID: 140935 **UniProt ID:** Q8VH46 Cytogenetics: 14q21

Gene Summary:Can cross-link actin filaments into both network and bundle structures. May modulate<br/>changes in actin filament integrity and induce lamellipodia formation. May function as an<br/>adapter molecule that links other proteins, such as SRC and PKC to the actin cytoskeleton (By<br/>similarity).[UniProtKB/Swiss-Prot Function]
