

Product datasheet for RR207279L3V

Pcp4 (NM_013002) Rat Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles Product Name: Pcp4 (NM_013002) Rat Tagged ORF Clone Lentiviral Particle Symbol: Pcp4 pep-19; PEPZ19 Synonyms: **Mammalian Cell** Puromycin Selection: Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092) Myc-DDK Tag: ACCN: NM 013002 ORF Size: 186 bp The ORF insert of this clone is exactly the same as(RR207279). **ORF** Nucleotide Sequence: **OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info **OTI** Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. **RefSeq:** NM 013002.4, NP 037134.1 **RefSeq Size:** 571 bp **RefSeq ORF:** 189 bp Locus ID: 25510 **UniProt ID:** P63055 Cytogenetics: 11q11

Gene Summary:The protein encoded by this gene regulates H1˚ and H3.3 histone synthesis by binding
to H1˚ and H3.3 histone mRNAs. The encoded protein can bind calmodulin as well,
providung a possible link between calcium-dependent signals and histone metabolism. Two
transcript variants encoding different isoforms have been found for this gene. [provided by
RefSeq, Jul 2012]
