

Product datasheet for RR208302L3V

Fxyd4 (NM_022388) Rat Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles Product Name: Fxyd4 (NM_022388) Rat Tagged ORF Clone Lentiviral Particle Symbol: Fxyd4 Chif Synonyms: **Mammalian Cell** Puromycin Selection: Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092) Myc-DDK Tag: ACCN: NM 022388 ORF Size: 261 bp The ORF insert of this clone is exactly the same as(RR208302). **ORF** Nucleotide Sequence: **OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info **OTI** Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. **RefSeq:** NM 022388.1, NP 071783.1 **RefSeq Size:** 1362 bp **RefSeq ORF:** 264 bp Locus ID: 64190 **UniProt ID:** Q63113 Cytogenetics: 4q42

Styd4 (NM_022388) Rat Tagged ORF Clone Lentiviral Particle – RR208302L3V Fxyd4 (NM_022388) Rat Tagged ORF Clone Lentiviral Particle – RR208302L3V

Gene Summary:This gene encodes a member of a family of small membrane proteins that share a 35-amino
acid signature sequence domain, beginning with the sequence PFXYD and containing 7
invariant and 6 highly conserved amino acids. The approved human gene nomenclature for
the family is FXYD-domain containing ion transport regulator. Mouse FXYD5 has been termed
RIC (Related to Ion Channel). FXYD2, also known as the gamma subunit of the Na,K-ATPase,
regulates the properties of that enzyme. FXYD1 (phospholemman), FXYD2 (gamma), FXYD3
(MAT-8), FXYD4 (CHIF), and FXYD5 (RIC) have been shown to induce channel activity in
experimental expression systems. Transmembrane topology has been established for two
family members (FXYD1 and FXYD2), with the N-terminus extracellular and the C-terminus on
the cytoplasmic side of the membrane. [provided by RefSeq, Jul 2008]
