

Product datasheet for **RR212003L3V**

Ehd2 (NM_001024897) Rat Tagged ORF Clone Lentiviral Particle

Product data:

| | |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Product Type: | Lentiviral Particles |
| Product Name: | Ehd2 (NM_001024897) Rat Tagged ORF Clone Lentiviral Particle |
| Symbol: | Ehd2 |
| Synonyms: | MGEPS |
| Mammalian Cell Selection: | Puromycin |
| Vector: | pLenti-C-Myc-DDK-P2A-Puro (PS100092) |
| Tag: | Myc-DDK |
| ACCN: | NM_001024897 |
| ORF Size: | 1629 bp |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(RR212003). |
| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| RefSeq: | NM_001024897.1 , NP_001020068.1 |
| RefSeq Size: | 2057 bp |
| RefSeq ORF: | 1632 bp |
| Locus ID: | 361512 |
| UniProt ID: | Q4V8H8 |
| Cytogenetics: | 1q21 |

Gene Summary:

ATP- and membrane-binding protein that controls membrane reorganization/tubulation upon ATP hydrolysis. Plays a role in membrane trafficking between the plasma membrane and endosomes. Important for the internalization of GLUT4. Required for fusion of myoblasts to skeletal muscle myotubes. Required for normal translocation of FER1L5 to the plasma membrane. Regulates the equilibrium between cell surface-associated and cell surface-dissociated caveolae by constraining caveolae at the cell membrane.[UniProtKB/Swiss-Prot Function]
