

# Product datasheet for RR212586L4

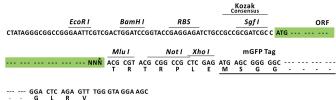

# Dnajc10 (NM\_001106486) Rat Tagged Lenti ORF Clone

### **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

| Product Type:                | Expression Plasmids  |
|------------------------------|--|
| Product Name:                | Dnajc10 (NM_001106486) Rat Tagged Lenti ORF Clone              |
| Tag:                         | mGFP   |
| Symbol:                      | Dnajc10  |
| Mammalian Cell<br>Selection: | Puromycin  |
| Vector:                      | pLenti-C-mGFP-P2A-Puro (PS100093)                              |
| E. coli Selection:           | Chloramphenicol (34 ug/mL)                                     |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RR212586). |
| <b>Restriction Sites:</b>    | Sgfl-Mlul  |
| Cloning Scheme:              | Cloning sites used for ORF Shuttling:                          |
|                              | Sgf I ORF Miu I<br>GCG ATC GCC ATG// NNN ACG CGT               |
|                              | Kozak  |

\* The last codon before the Stop codon of the ORF.

ACCN: ORF Size: NM\_001106486 2379 bp

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

| Dnajc10 (NM_001106486) Rat Tagged Lenti ORF Clone – RR212586L4 |   |
|--|---|
| OTI Disclaimer:  | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:  | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| Components:  | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).  |
| Reconstitution Method:   | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>  |
| RefSeq:  | <u>NM 001106486.2, NP 001099956.2</u>   |
| RefSeq Size:   | 4159 bp   |
| RefSeq ORF:  | 2382 bp   |
| Locus ID:  | 295690  |
| UniProt ID:  | <u>Q498R3</u>   |
| Cytogenetics:  | 3q24  |
| Gene Summary:  | Endoplasmic reticulum disulfide reductase involved both in the correct folding of proteins<br>and degradation of misfolded proteins. Required for efficient folding of proteins in the<br>endoplasmic reticulum by catalyzing the removal of non-native disulfide bonds formed during<br>the folding of proteins, such as LDLR. Also involved in endoplasmic reticulum-associated<br>degradation (ERAD) by reducing incorrect disulfide bonds in misfolded glycoproteins<br>recognized by EDEM1. Interaction with HSPA5 is required its activity, not for the disulfide<br>reductase activity, but to facilitate the release of DNAJC10 from its substrate. Promotes<br>apoptotic signaling pathway in response to endoplasmic reticulum stress (By similarity).<br>[UniProtKB/Swiss-Prot Function] |
