

Product datasheet for RR214228L1

Ppid (NM_001004279) Rat Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Ppid (NM_001004279) Rat Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: Ppid

Synonyms: Cyp-40; CypD

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RR214228).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_001004279

ORF Size: 1110 bp

Ppid (NM_001004279) Rat Tagged Lenti ORF Clone - RR214228L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001004279.1</u>, <u>NP 001004279.1</u>

 RefSeq Size:
 1353 bp

 RefSeq ORF:
 1113 bp

 Locus ID:
 361967

 UniProt ID:
 Q6DGG0

 Cytogenetics:
 2q33

Gene Summary: PPlase that catalyzes the cis-trans isomerization of proline imidic peptide bonds in

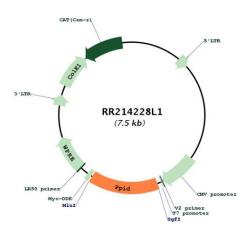

oligopeptides and may therefore assist protein folding. Proposed to act as a co-chaperone in HSP90 complexes such as in unligated steroid receptors heterocomplexes. Different co-chaperones seem to compete for association with HSP90 thus establishing distinct HSP90-co-chaperone-receptor complexes with the potential to exert tissue-specific receptor activity control. May have a preference for estrogen receptor complexes and is not found in glucocorticoid receptor complexes. May be involved in cytoplasmic dynein-dependent movement of the receptor from the cytoplasm to the nucleus. May regulate MYB by inhibiting its DNA hinding activity layered in regulation of ALIB signaling by promoting the formation

its DNA-binding activity. Involved in regulation of AHR signaling by promoting the formation of the AHR:ARNT dimer; the function is independent of HSP90 but requires the chaperone activity region. Involved in regulation of UV radiation-induced apoptosis.[UniProtKB/Swiss-

Prot Function]
