Alpha-Synuclein / SNCA (E46K Mutant) Human Protein – SA6009
Alpha-synuclein is a member of the synuclein family, which also includes beta- and gamma- synuclein. Synucleins are abundantly expressed in the brain and alpha- and beta-synuclein inhibit phospholipase D2 selectively. SNCA may serve to integrate presynaptic signaling and membrane trafficking. Defects in SNCA have been implicated in the pathogenesis of Parkinson disease. SNCA peptides are a major component of amyloid plaques in the brains of patients with Alzheimer's disease. Alternatively spliced transcripts encoding different isoforms have been identified for this gene. [provided by RefSeq, Feb 2016]
s: Druggable Genome
ys: Alzheimer's disease, Parkinson's disease
