

Product datasheet for SC127275

Histone acetyltransferase MYST3 (KAT6A) (NM_006766) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	Histone acetyltransferase MYST3 (KAT6A) (NM_006766) Human Untagged Clone
Tag:	Tag Free
Symbol:	Histone acetyltransferase MYST3
Synonyms:	ARTHS; MOZ; MRD32; MYST-3; MYST3; RUNXBP2; ZC2HC6A; ZNF220
Mammalian Cell Selection:	None
Vector:	<u>pCMV6-XL6</u>
E. coli Selection:	Ampicillin (100 ug/mL)
Fully Sequenced ORF:	>OriGene ORF sequence for NM_006766 edited

```

Restriction Sites:	NotI-NotI
ACCN:	NM_006766
Insert Size:	7900 bp
OTI Disclaimer:	Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	NM_006766.2 , NP_006757.1
RefSeq Size:	7861 bp
RefSeq ORF:	6015 bp
Locus ID:	7994
UniProt ID:	Q92794
Cytogenetics:	8p11.21
Domains:	PHD, MOZ_SAS, linker_histone
Protein Families:	Druggable Genome, Transcription Factors

Gene Summary:

This gene encodes a member of the MOZ, YBFR2, SAS2, TIP60 family of histone acetyltransferases. The protein is composed of a nuclear localization domain, a double C2H2 zinc finger domain that binds to acetylated histone tails, a histone acetyl-transferase domain, a glutamate/aspartate-rich region, and a serine- and methionine-rich transactivation domain. It is part of a complex that acetylates lysine-9 residues in histone 3, and in addition, it acts as a co-activator for several transcription factors. Allelic variants of this gene are associated with an autosomal dominant form of cognitive disability. Chromosomal translocations of this gene are associated with acute myeloid leukemia. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jul 2017]

Transcript Variant: This variant (1) represents the longer transcript and encodes the longer isoform (1).
