## GIYD2 (SLX1B) (NM\_024044) Human 3' UTR Clone

**Product data:** 

**Product Type:** 3' UTR Clones

**Product Name:** GIYD2 (SLX1B) (NM\_024044) Human 3' UTR Clone

Symbol: GIYD2 Synonyms: GIYD2

Mammalian Cell

Selection:

Neomycin

**Vector:** pMirTarget (PS100062)

**ACCN:** NM\_024044

**Insert Size:** 125 bp

Insert Sequence: >SC200828 3'UTR clone of NM\_024044

The sequence shown below is from the reference sequence of NM\_024044. The complete

sequence of this clone may contain minor differences, such as SNPs.

**Restriction Sites:** Sgfl-Mlul

OTI Disclaimer: Our molecular clone sequence data has been matched to the sequence identifier above as a

point of reference. Note that the complete sequence of this clone is largely the same as the

reference sequence but may contain minor differences, e.g., single nucleotide

polymorphisms (SNPs).

**Components:** The cDNA clone is shipped in a 2-D bar-coded Matrix tube as 10 ug dried plasmid DNA. The

package also includes 100 pmols of both the corresponding 5' and 3' vector primers in

separate vials.

RefSeq: <u>NM 024044.4</u>

## GIYD2 (SLX1B) (NM\_024044) Human 3' UTR Clone - SC200828

**Summary:** This gene encodes a protein that is an important regulator of genome stability. The protein

represents the catalytic subunit of the SLX1-SLX4 structure-specific endonuclease, which can

resolve DNA secondary structures that are formed during repair and recombination processes. Two identical copies of this gene are located on the p arm of chromosome 16 due

to a segmental duplication; this record represents the more telomeric copy. Alternative splicing results in multiple transcript variants. Read-through transcription also occurs between this gene and the downstream SULT1A4 (sulfotransferase family, cytosolic, 1A,

phenol-preferring, member 4) gene. [provided by RefSeq, Nov 2010]

**Locus ID:** 79008
